

PENETRATION TESTING

Penetration Testing as a Service

Human-powered security testing for all your assets, launched quickly and at scale

Bugcrowd PTaaS Solutions

Summary

Threat actors love status quo penetration testing because its long ramp-ups, inflexibility, low-quality results, and remediation delays leave your digital assets exposed.

In contrast, they hate Penetration Testing as a Service (PTaaS) solutions on the Bugcrowd Platform™. We make penetration tests easy to launch, run, and scale per your precise assets and requirements, while delivering compliance assurance along with better results for risk reduction. Plus, we offer continuous testing, pen testing combined with bug bounty, and consumption pricing via subscription to ensure your best ROI from security testing.

Bugcrowd	Traditional ad hoc testing
Pay as you go or subscription/drawdown	Pay as you go
Predictable annual spend	Unpredictable annual spend
Launch in 48–72 hours	Slow launches
Elastic capacity with 350+ skill sets	Limited capacity and skill sets
Structured to reflect your organization and processes	Unstructured
Easy to scale and repeat	Hard to scale and repeat
24/7 visibility into engagements individually, across programs, and across the organization	No visibility during testing
Integrated with existing DevSec workflows	Siloed

Web Application Pen Test

Test web applications of any complexity.

AI Pen Test

Uncover common security-related vulnerabilities in LLM applications (data bias excluded).

Network Pen Test

Rely on expert network pen testers to find hidden flaws that other approaches can't.

Mobile Application Pen Test

Count on excellent results from a curated team of mobile app security experts.

Cloud Configuration Review

Identify vulnerabilities unique to cloud environments.

API Pen Test

Test the security of your APIs, with results fully integrated with your SDLC, before they ship.

IoT and OT Pen Tests

Find cyber-physical vulnerabilities unique to connected devices and infrastructure, from pacemakers to power grids.

Social Engineering Pen Test

Run a specialized test to assess how your organization responds to common human-based threats.

Continuous Attack Surface Pen Test

Address changes detected in your attack surface with ongoing testing.

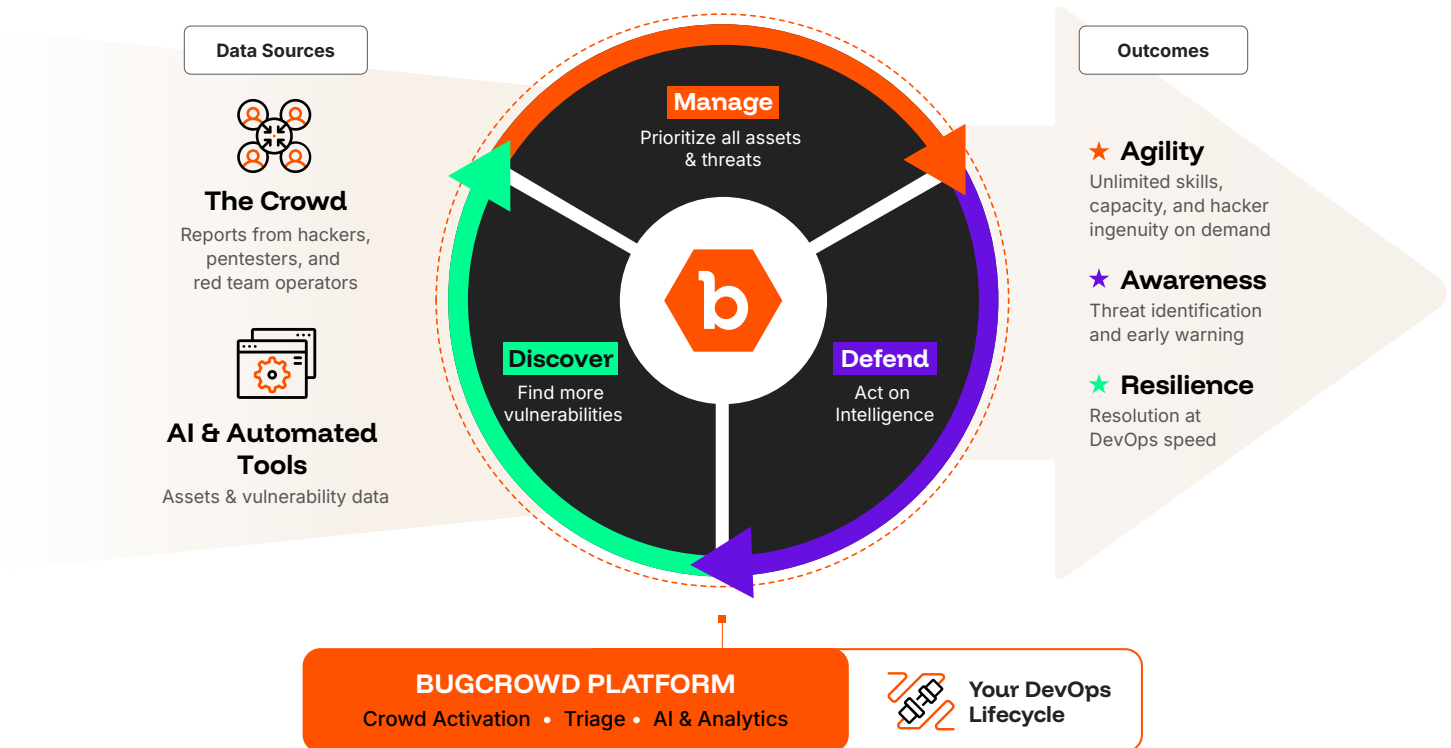

Packages and Options

Bugcrowd Pen Testing as a Service (PTaaS) solutions are available in a variety of configurations, and for a variety of assets, for all your compliance and risk reduction needs. Bugcrowd PTaaS tests launch in days—not weeks—and are as scalable and repeatable as you need.

	STANDARD	PLUS	MAX	CONTINUOUS
Standard	Zero-complexity testing for basic compliance	Customized testing for bespoke requirements	Maximum risk reduction	Complete coverage
Targets	External web apps/networks, APIs, mobile apps, and cloud configuration	Everything in Standard plus internal targets (crypto, IoT, OT, binary, LLM app, and onsite testing at extra cost)	Everything in Plus	External Attack Surface/Networks
Testing Type	Human Tested	Human Tested	Human Tested	Automated and Human Tested
Duration	Time-boxed	Time-boxed	Time-boxed or Continuous	Continuous
Report	Platform-generated	Customized	Customized	Customized
Methodology	Standard (e.g., PCI 6.6 and 11.3)	Customized	Customized	Customized
Retesting	For up to 12 months	For up to 12 months	For up to 12 months	For up to 12 months
Special requirements Geolocation/testing time restrictions, special skills, CREST certification, etc. (via CrowdMatch AI)	Not Offered	✓ Included	✓ Included	✓ Included
Expedited launch	Option	Option	Option	Option
Report readout	Option	Option	Option	Option

Bugcrowd Platform

The Bugcrowd Platform fuses AI with real-time, crowdsourced intelligence from the world's top ethical hackers, pentesters, and red teamers (aka The Crowd), as well as from automated tools that generate asset, threat, and vulnerability data. The powerful combination of human creativity and automation empowers you to continuously:

Agility

Augment Your Team On Demand

- ✓ Attacker mindset on tap for vulnerability discovery, pen testing, and red teaming
- ✓ 350+ skill sets and certifications available
- ✓ Crowd curation and activation guided by data and AI

Awareness

See and Prioritize Emerging Threats

- ✓ Continuous vulnerability intake, validation, and triage at scale
- ✓ 24/7 triage coverage with same-day response for P1s
- ✓ Early warning of emerging vulnerabilities

Resilience

Continuously Improve Security Posture

- ✓ Actionable reporting, benchmarking, and recommendations
- ✓ Directly integrates with existing tools for change at DevOps speed
- ✓ Deep bench of solution & support specialists at your side for quick wins and long-term ROI

Unleash Human Creativity for Proactive Security
